*Recertification for MCSE: Server Infrastructure*

**Answer:** C

**QUESTION:** 99

Your company has an office in New York. Many users connect to the office from home by using the Internet. You deploy an Active Directory Certificate Services (AD CS) infrastructure that contains an enterprise certification authority (CA) named CA1. CA1 is only available from hosts on the internal network. You need to ensure that the certificate revocation list (CRL) is available to all of the users. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Create a scheduled task that copies the CRL files to a Web server.
- B. Run the Install-ADCSWebEnrollment cmdlet.
- C. Run the Install-EnrollmentPolicyWebService cmdlet.
- D. Deploy a Web server that is accessible from the Internet and the internal network.
- E. Modify the location of the Authority Information Access (AIA).
- F. Modify the location of the CRL distribution point (CDP).

**Answer:** A, D, F

**Explanation:**

CRLs will be located on Web servers which are Internet facing. CRLs will be accessed using the HTTP retrieval protocol.

[CRLs will be accessed using an external URL of http://dp1.pki.contoso.com/pki](http://dp1.pki.contoso.com/pki)

F: To successfully authenticate an Internet Protocol over Secure Hypertext Transfer Protocol (IP-HTTPS)-based connection, DirectAccess clients must be able to check for certificate revocation of the secure sockets layer (SSL) certificate submitted by the DirectAccess server. To successfully perform intranet detection, DirectAccess clients must be able to check for certificate revocation of the SSL certificate submitted by the network location server. This procedure describes how to do the following: Create a Web-based certificate revocation list (CRL) distribution point using Internet Information Services (IIS) Configure permissions on the CRL distribution shared folder Publish the CRL in the CRL distribution shared folder Reference: Configure a CRL Distribution Point for Certificates

**QUESTION:** 100

**HOTSPOT**

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2012 R2. The forest contains two servers. The servers are configured as shown in the following table.

Server name	Role
Server1	Active Directory Federation Services (AD FS)
Server2	Web application proxy

You prepare the forest to support Workplace Join and you enable the Device Registration Service (DRS) on Server1. You need to ensure that Workplace Join meets the following requirements:

- ⇒ Application access must be based on device claims.
  - ⇒ Users who attempt to join their device to the workplace through Server2 must be prevented from locking out their Active Directory account due to invalid credentials.
- Which cmdlet should you run to achieve each requirement? To answer, select the cmdlet for each requirement in the answer area.

#### Answer Area

Application access must be based on device claims:

Users who attempt to join their device to the workplace through Server2 must be prevented from locking out their Active Directory account due to invalid credentials:

#### Answer Area

Application access must be based on device claims:

Set-AdfsClaimsProviderTrust  
Set-AdfsGlobalAuthenticationPolicy  
Set-AdfsProperties  
Set-AdfsRelyingPartyTrust

Users who attempt to join their device to the workplace through Server2 must be prevented from locking out their Active Directory account due to invalid credentials:

Set-AdfsClaimsProviderTrust  
Set-AdfsGlobalAuthenticationPolicy  
Set-AdfsProperties  
Set-AdfsRelyingPartyTrust

**Answer:**  
Exhibit

**Answer Area**

Application access must be based on device claims:

A screenshot of a PowerShell command list. The commands are: Set-AdfsClaimsProviderTrust, Set-AdfsGlobalAuthenticationPolicy, Set-AdfsProperties, and Set-AdfsRelyingPartyTrust. The command 'Set-AdfsGlobalAuthenticationPolicy' is highlighted with a green box.

Users who attempt to join their device to the workplace through Server2 must be prevented from locking out their Active Directory account due to invalid credentials:

A screenshot of a PowerShell command list. The commands are: Set-AdfsClaimsProviderTrust, Set-AdfsGlobalAuthenticationPolicy, Set-AdfsProperties, and Set-AdfsRelyingPartyTrust. The command 'Set-AdfsProperties' is highlighted with a green box.

**QUESTION: 101**

Your network contains the following roles and applications:

- ☞ Microsoft SQL Server 2012
- ☞ Distributed File System (DFS) Replication
- ☞ Active Directory Domain Services (AD DS)
- ☞ Active Directory Rights Management Services (AD RMS)
- ☞ Active Directory Lightweight Directory Services (AD LDS)

You plan to deploy Active Directory Federation Services (AD FS). You need to identify which deployed services or applications can be used as attribute stores for the planned AD FS deployment. What should you identify? (Each correct answer presents a complete solution. Choose all that apply.)

- A. DFS
- B. AD RMS
- C. Microsoft SQL Server 2012
- D. AD LDS
- E. AD DS

**Answer:** C, D, E

**QUESTION: 102**

Your company has 10,000 users located in 25 different sites. All servers run Windows Server 2012. All client computers run either Windows 7 or Windows 8. You need to recommend a solution to provide self-service password reset for all of the users. What should you include in the recommendation?

- A. The Microsoft System Center 2012 Service Manager Self-Service Portal and Microsoft System Center 2012 Orchestrator runbooks

- B. Microsoft System Center 2012 Operations Manager management packs and Microsoft System Center 2012 Configuration Manager collections
- C. The Microsoft System Center 2012 Service Manager Self-Service Portal and Microsoft System Center 2012 Operation Manager management packs
- D. Microsoft System Center 2012 App Controller and Microsoft System Center 2012 Orchestrator runbooks

**Answer:** A

**QUESTION:** 103

Your network contains an Active Directory domain named contoso.com. The domain contains 200 servers that run either Windows Server 2012 R2, Windows Server 2012, or Windows Server 2008 R2. The servers run the following enterprise applications:

- ☞ Microsoft Exchange Server 2013
- ☞ Microsoft SQL Server 2014

System Center 2012 R2 Operations Manager is deployed to the domain. Operations Manager monitors all of the servers in the domain. Audit Collection Services (ACS) is installed. You need to recommend a monitoring strategy for the domain that meets the following requirements:

- ☞ A group of administrators must be notified when an error is written to the System log on the servers that run Exchange Server 2013.
- ☞ A group of administrators must be notified when a specific event is written to The Application log on the servers that run SQL Server 2014.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From Operations Manager, enable audit collection.
- B. From Operations Manager, implement two monitors.
- C. From Computer Management, implement one event subscription.
- D. From Operations Manager, implement two rules.

**Answer:** D

**QUESTION:** 104

Your company has three main offices named Main1, Main2, and Main3. The network contains an Active Directory domain named contoso.com. Each office contains a help desk group. You plan to deploy Microsoft System Center 2012 Configuration Manager to meet the following requirements:

- ☞ The members of the Domain Admins group must be able to manage all of the Configuration Manager settings.

☞ The help desk groups must be able to manage only the client computers in their respective office by using Configuration Manager.

You need to recommend a Configuration Manager infrastructure to meet the requirements. Which infrastructure should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Three sites that contain one collection for each office
- B. One site that contains one collection
- C. Three sites that each contain one collection
- D. One site that contains a collection for each office

**Answer:** D

**QUESTION:** 105

Your network contains the following:

- ☞ 20 Hyper-V hosts
- ☞ 100 virtual machines
- ☞ 2,000 client computers

You need to recommend an update infrastructure design to meet the following requirements:

- ☞ Deploy updates to all of the virtual machines and the client computers from a single console.
- ☞ Generate reports that contain a list of the applied updates.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager and a second WSUS server that is integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM)
- B. One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM)
- C. One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager, a second WSUS server integrated with Microsoft System Center 2012 Virtual Machine Manager (VMM), and a third standalone WSUS server.
- D. One Windows Server Update Services (WSUS) server integrated with Microsoft System Center 2012 Configuration Manager and Microsoft System Center 2012 Virtual Machine Manager (VMM)

**Answer:** D

**QUESTION:** 106

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure. All client computers have a custom application named App1 installed. App1 generates an Event ID 42 every time the application runs out of memory. Users report that when App1 runs out of memory, their client computer runs slowly until they manually restart App1. You need to recommend a solution that automatically restarts App1 when the application runs out of memory. The solution must use the least amount of administrative effort. What should you include in the recommendation?

- A. From Configurations Manager, create a desired configuration management baseline.
- B. From Windows System Resource Manager, create a resource allocation policy.
- C. From Event Viewer, attach a task to the event.
- D. From Operations Manager, create an alert.

**Answer:** D

**QUESTION:** 107

Your company has a human resources department and a finance department. You are planning an administrative model for both departments to meet the following requirements:

- ☞ Provide human resources managers with the ability to view the audit logs for the files of their department.
- ☞ Ensure that only domain administrators can view the audit logs for the files of the finance department.

You need to recommend a solution for the deployment of file servers for both departments. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Deploy one file server. Add the human resources managers to the local Administrators group.
- B. Deploy one file server. Add the human resources managers to the local Event Log Readers group.
- C. Deploy two file servers. Add the human resources managers to the local Administrators group on one of the servers.
- D. Deploy two file servers. Add the human resources managers to the local Event Log Readers group on one of the servers.

**Answer: D**
